

Data Management

Job Description

Date: 7th September 2017

Mobacar

Mobacar is an advanced Artificial Intelligence and Travel Technology company. We are a successful high growth technology company with offices in Kerry and Dublin. Our approach to analytics at the core, makes this a unique opportunity for a Data Manager to work in an advanced, AI driven environment. We strive on creativity and the successful growth and development of our team. Our technology, our team and our products are gaining global acclaim for our innovation and approach. Every new team member is carefully selected to ensure not only that Mobacar will continue to disrupt the travel industry but that each new member has a clear path to grow and develop.

Mobacar has a unique approach which combines Data Science and Customer Experience techniques to increase short term conversions & revenue and the long-term customer performance of our partners.

Job Description

The position requires a Data Manager with excellent experience in data management on high volume transaction environments.

The responsibilities include:

- Design of data models to support product development, data analysis and data science
- Design and implementation of data management processes across operational databases, data marts, data warehouse and the data lake
- Managing all operational data processes
- Working with data analysts and data scientists to provide timely quality data
- Enhancing data marts with analytically derived data elements
- Working with product development to ensure operational data is fit for purpose for analysis and data science
- Ensuring data quality and advising the organisation on best practice

The position is based in Killarney, Co. Kerry.

Skills and Experience

- 3+ years experience in data management
- 3+ years experience in the following or equivalent database technologies - MongoDB, MySQL, ElasticSearch, Redshift
- Experience in data integration and data management technologies such as Spark (EMR) and Kafka
- Excellent SQL skills
- Excellent programming skills in data management scripting via Python, R, Scala, etc.
- Ability to work well in an agile team while taking responsibility for core development decisions
